CalHacks Devpost!

CalHacks Main Doc

Prizes to Target

Name	Description	Prize	Our Feature!
Meta/Facebook: Bringing People Closer Together with AI (Meta Inc)	Projects will be judged on how meaningfully they strengthen human connection, how essential and well-integrated AI is, originality, and the strength of the working demo.	Invitation to advance to the Round 2 Hackathon hosted at Meta's Menlo Park campus (travel and accommodations provided; advancement subject to eligibility verification and compliance with Meta's Round 2 Official Rules); Meta swag bag	**Group Budget**: Budget for friends to set as a group and plan on not exceeding Recorded messages from your friends that come up when you go over budget!
Anthropic	1. **A named community**. ""Students"" is too broad. ""Transfer students at Berkeley trying to find housing"" is the right register. 2. **A real problem**. You have lived it, or you talked to someone who has. 3. **It works**. One thing done well and usable on Monday beats a broad demo. 4. **Thoughtful use of Claude**. Claude does something that matters to the solution, and you know where it could go wrong for the people using it.	Coming soon!	**Community**: College students/new grad new to personal finance **Problem**: Struggling with budgeting independently for the first time **Claude**:
Grand Prize: Built for the Real World (Microsoft)	**Track Challenge**: Build a production-minded AI agent that solves a meaningful problem in finance, productivity, healthcare, or another high-impact domain **Judging Criteria**: ● Customer understanding ● Measurable usefulness ● Path from prototype to production ● responsible design ● end to end functionality	A Microsoft Surface laptop for each member of the winning team; present your project remotely at a Microsoft Delta/Frontier Co. FDE team tech talk; 1:1 mentorship with senior FDEs from the Delta/Frontier Co team	"solves a meaningful problem in finance"

Microsoft Customer Impact Award (Microsoft)	Same as above!	Present your project remotely at a Microsoft Delta/Frontier Co. FDE team tech talk; 1:1 mentorship with senior FDEs from the Microsoft Delta team	"solves a meaningful problem in finance"
Best use of Reimagining Shopping sponsored by Visa (Visa)	**Innovation (25%) –** How creative does the solution reimagine the shopping experience? **User Experience (25%) –** Does the experience feel intuitive, useful, and seamless? **Technical Execution (20%) -** How effectively has the team implemented AI and supporting technologies? **Commerce Impact (15%) -** Can the solution improve customer engagement, conversion, loyalty, or merchant outcomes? **Trust & Responsibility (15%) -** Does the solution address privacy, transparency, security, and responsible use of AI?	$5,000	
Best Use of Fetch.ai (Fetch.ai)	https://www.fetch.ai/events/calhacks-13-0	1st Prize - $1500; 2nd Prize - $1000; 3rd Prize - $500	
Best Use of x402 by Coinbase (Coinbase)	https://drive.google.com/file/d/12TnPLgduV3gh1zY_TJ176XmVDz2RGW9/view?usp=sharing **Payment Agent Track**: Give an agent a way to pay for things, earn money, or both. Use the Coinbase MCP for Agents and x402 to explore what an agent can do when it can participate in commerce.	$500 USDC + recruiter call per team member per track, for each of the two tracks (up to $4000 total)	**Budget Payment Agents**: Agents that complete payments for certain parts of the budget autonomously (while asking for confirmation prior to paying)
Best Use of Cartesia	Build a useful voice experience with Cartesia. Voice should be core to the product–not just a feature added for the demo. Other tools are fine; make clear what Cartesia contributes. **What to submit** • A working demo • A 2-minute, demo-first presentation: one complete user flow, then a brief problem + how you built it • A short README: setup, Cartesia features used, known limitations	$1,516 in cash Meta glasses (still TBD)	Voice AI

	• Source access for judges (per event rules). No API keys or secrets in the repo **Judging criteria (25% each)** **Problem and originality** — Useful, clearly scoped, thoughtfully designed? **Use of Cartesia** — Meaningfully integrated into the core experience? Voice clear, responsive, and natural? **Execution** — Main flow works? Likely edge cases handled? **Impact and responsibility** — Accessibility, privacy, and responsible use considered? We'll favor a strong working prototype over a large unfinished idea. **Ideas** • **Commute standup** — voice-only morning brief you can interrupt while driving (hands-busy) • **Ambient / wearable assistant** — help without pulling out a phone • **Keep-your-voice accessibility** — clone for reading aloud or speaking another language • **Live coach or translator** — low-latency back-and-forth where voice quality matters • **Multi-speaker agent** — tutor, debate partner, or support sim with distinct voices Docs: https://docs.cartesia.ai Playground: https://play.cartesia.ai		
Figma	Cal Hacks <> Figma Final submission should consist of three deliverables: • Demo video (3 minutes maximum) • Workflow Artifact / **Stage Log** (200 words max per stage) • Figma Slides demonstrating your work & workflow (required)	• Best Use Case of Figma Agent • Best Use Case of Figma • Most Creative Use Case of Figma Agent • Best Design • Most Creative $1,000 in cash	

- [Stage log] State which Figma product you used & why.
  - Example here — feel free to edit and add on as needed
- [Demo Video] Showcase your build in a quick demo
- [Working Code & Prototype] Must embed your Figma Make(s) and/or Figma prototype(s) (files!) showcasing how you used Figma.

The stage log covers four stages, and you may explain the stages you used Figma in:

Stage	
Ideation	Exploring and shapi
Prototypin g	Making something y click through or try
Handoff	Moving a design or s implementation
Code generation	Producing the worki

For each stage, tell us:

	• Which Figma tool(s) you used (Figma Design, Make, a Figma agent, etc.) & why • About how many minutes you spent • How well it worked, from 1 to 5 • How the output made it into your final project		
Best Use of Nessie (Capital One)	Completeness, Creativity, Complexity	$300 Giftogram per person on winning team	

Idea

pocket

Summary:

pocket is a location-aware personal finance app that helps you make smarter spending decisions in real time. Unlike traditional budgeting apps that show you how much you've spent *after* a purchase, pocket tells you **how much you can comfortably spend before you buy.**

User Flow:

1. Capital One Nessie informs app about transactions user has made
2. App has dashboards containing payments and a breakdown with subsections of the users payment history
3. Fetch.AI agent will track user's location and spending habits
4. If user is exceeding spending habits, Fetch.AI will call Twilio API to suggest alternatives to the user:
    a. If user likes the alternative, they can text back so that Fetch.AI can conduct the payment for the user
    b. If the user wants to continue with the purchase, it will reallocate the budget for the user

Features:

- Notification of how much you can spend in a place that you enter (tracks location)
- Once you reach a **low budget**:
    - Give a warning before paying (similar to IG screen time)
    - Recommend other places to go to complete the same task (ex. expensive bakery vs. cheaper neighborhood bakery)
- Lets you reallocate your budget based on your personal spending to areas you're overspending
    - Can do this manually using voice and get recommendations too
- **For groups**: Social budget with friends
    - Tracks you and friends' locations
    - Allot a part of the budget for social spending
        - If social spending is done repeatedly with friends in the group, a group will be suggested to form to track group spending habits more granularly
- *Dashboard*:
    - Track spending from all places you spent at and get personalized budget report of subsections where you overspend + how to improve spending
    - Get heatmap of places where you most frequently spend

Example:

You walk into your favorite bakery, and pocket sends a notification:

> 🥐 **pocket**
>
> You've spent $86 of your $120 café budget this month.
>
> **Suggested spending today: $6**
>
> Stay on track while enjoying your usual favorites.

Key Features:

- 📍 **Location-Based Budgeting:** Automatically surfaces your budget when you enter a store.
- 🧠 **Dynamic Spending Allowances:** Adjusts recommendations based on spending habits and remaining monthly funds.
- 💳 **Transaction Tracking:** Connects purchases to specific merchants and spending categories.
- 🗺️ **Spending Heatmap:** Visualizes where you spend the most money.
    - *Agentic Spending*: Recognizes patterns in spending and uses payment agents to spend them automatically
- 🔔 **Smart Notifications:** Alerts you when you're approaching spending limits without overwhelming you.

What Makes It Different?

Traditional budgeting apps help you **track your money**.

pocket helps you decide how to spend it, exactly when and where it matters.

One-Sentence Pitch

pocket is a location-aware financial assistant that turns your monthly budget into personalized, real-time spending recommendations whenever you walk into a store.
